PRESENT

**Environmental Compliance and  
Pollution Prevention Conference  
for Hospitals**

Wednesday, July 23, 2003

Registration and Breakfast 8:30 to 9:00 AM

Preregistration and payment is required.

Program is 9:00 AM to 4:30 PM

## WHY ATTEND?

**Environmental regulations:** Health care facilities must comply with numerous federal environmental regulations. On December 27<sup>th</sup>, 2002, EPA Region 2 (NY, NJ, PR and USVI) sent out a letter to 480 hospitals announcing the Regional Hospital Compliance Initiative. As a part of the Initiative EPA is making unannounced inspections of hospitals and documenting noncompliance. Violations are being identified, press releases issued and fines are being assessed. Recently a major hospital in the New York metropolitan area was assessed over \$300,000 for lead violations. This conference will provide information on compliance with major federal regulations and those which are not covered will be referenced in the handouts. Attending is crucial to understanding how to maintain operations that are safe and meet federal environmental requirements.

Health care facilities must comply with the regulations, ensuring the safe handling of hazardous materials and the reduction of negative environmental health impacts.

The guidelines presented will help maintain a safe work environment for patients, staff and the communities you serve. In addition, by complying, these facilities will save money in the long run. And most certainly not doing so may lead to public health hazards, violations and fines.

**Voluntary Audit Policy:** In many instances EPA action can be avoided by voluntary compliance through the use of EPA's Audit Policy. The Policy has several important goals including promoting greater compliance with federal environmental laws through self-policing, discovery, disclosure, correction and prevention. If certain criteria are met, reductions in gravity-based penalties of up to 100%, resulting from EPA enforcement of violations discovered and disclosed by your institution under the Audit Policy, are possible.

**Pollution Prevention:** In addition, presentations on voluntary pollution prevention programs such as Energy Star, and WasteWise will also be made.

Pollution Prevention is the most environmentally sound way to go. It cuts down on pollution before it becomes a problem such as excess solid, hazardous and red bag wastes.

## WHO SHOULD ATTEND

Biomedical engineers; housekeeping managers; environmental health and safety directors; procurement officials; attorneys; and any person who has the authority to recommend and implement process change in your hospital.
